

**Fall 2016**

**HIS 399-04/HON 355-01:  
Climate Change and Environmental Stewardship  
MoWe 3:00PM - 4:15PM     Anderson 104  
With Prof. Charles Hardy**

Climate change has had a profound impact on world and American history, from the global warming that ended the last Pleistocene Age through the Little Ice Age that drove the Norse out of Greenland soon before Columbus first crossed the Atlantic Ocean, to its current impact on northern hemisphere ecosystems and nations.

In this course you will explore and analyze the:

- The history of climate change over the past 20,000 years,
- Contrasting political and governmental responses in the United States and Norway to the threats and challenges posed by climate change
- The politics of climate science,
- The history of the Deep Ecology movement,
- The personal and collective challenges of environmental stewardship and leadership.
