

# Upgrading to Sophos Endpoint Security and Control for Windows (v10.3)

---

## UNINSTALLING SOPHOS

1. Open Control Panel
2. Open Programs and Features
3. Select Sophos Anti-Virus – click Uninstall

## INSTALLING SOPHOS

**Note:** It is recommended that you uninstall the old version before proceeding with the upgrade.

1. Go to the following site: <http://www.wcupa.edu/sophos/>
2. Click the *Download* link under Windows
3. Type in your network username and password
4. Click *Yes* to the User Account Control box
5. Installation of the update will begin

**NOTE:** This version will **ONLY** support Windows Vista, 7, and 8

## To verify that you have the new version 10.3

1. Right – click on the Sophos  icon, located in the lower right corner of the monitor screen
2. Left- click **Open Sophos Endpoint Security and Control**
3. Locate the *Status* box – Product version should now read 10.3
