

Upgrading to Sophos Endpoint Security and Control for Mac (v9.1.6)

UNINSTALLING SOPHOS

1. Go to: <http://www.sophos.com/en-us/support/knowledgebase/119182.aspx>

UPDATING SOPHOS

Note: It is recommended that you uninstall the old version before proceeding with the upgrade.

1. Go to the following site: <http://www.wcupa.edu/sophos/>
2. Click the *Download* link under Macintosh
3. Type in your network username and password
4. Installation of the update will begin.

NOTE: This version will **ONLY** support OS X 10.6 and above.

To verify that you have the new Mac version 9.1.6

1. Click the Sophos icon , located in the upper right hand corner of your screen
2. Click About Sophos Anti-Virus at the bottom of the menu
3. Version should now read 9.1.6
